

DESIGN AND TECHNOLOGY FOR OPTIMAL HAND HYGIENE

New electronic soap dispenser

Electronic liquid soap dispenser

Design: available in 3 finishes

The DELABIE Group, expert in hygienic accessories for public and commercial places has launched its new electronic soap dispenser. Its aesthetic and functional lines make this soap dispenser an essential item for commercial washrooms.

Design

Available in three finishes - bright polished, polished satin and white powder-coated stainless steel - this new electronic soap dispenser adapts perfectly to different styles of interior decoration.

Total hygiene

Hand washing is the basis of good hygiene and an effective measure against bacteria. Electronics reinforce this efficiency.

The hands are detected automatically by an infrared sensor. Setting the sensor distance ensures that there is no manual contact with the soap dispenser, avoiding any contamination by hand.

As with most of DELABIE's accessories, the dispenser's cover is made from bacteriostatic 304 stainless steel. Its surface remains bright, hard and smooth, preventing bacteria from adhering easily.

Easy to clean

This new soap dispenser has been designed to meet a fundamental principle of hygiene in public and commercial places: daily cleaning. Its one-piece hinged cover offers easy maintenance and limits bacterial niches.

The soap tank prevents permanent stagnation of the soap, providing maximum hygiene.

Designed for public and commercial places

The number of soap doses per detection can be adjusted. The no waste, non-drip pump dispenser cannot be blocked, and it distributes the correct amount of soap per activation.

Equipped with the standard DELABIE key, any attempt at theft, a frequent occurrence in public and commercial washrooms, is removed.

This key, compatible with most of DELABIE's hygienic accessories, facilitates the upkeep of these accessories by maintenance staff.

The detection system uses very little energy and extends the battery life up to 300,000 cycles.

The low battery indicator light and level control window optimise maintenance. The tank is located above the battery compartment, so refilling the soap is easier.
