

DIRECT FLUSH, ONCE YOU'VE TRIED IT - THERE'S NO GOING BACK

Perfectly in tune with current thinking, more design-led, less noisy, more hygienic and, above all, better suited to intensive use than the alternative - WCs with cisterns - DELABIE's direct flush system is essential for public washrooms.

PUBLIC PLACES: In the age of convenience

Public buildings in the service sector face certain challenges when it comes to providing the right equipment to ensure user comfort over a long period of time.

More hygienic than WCs with cisterns, the direct flush system protects the user against the risk of bacterial development. Since there is no cistern, there is no water stagnation or scale build-up in the installation.

DELABIE's direct flush system is highly efficient, ensuring complete comfort for the user. It connects directly to the water system, so there is no refill time, and the flush can be activated without having to wait for the cistern to fill. Perfect for successive uses, the direct flush system also has a very short rinse time - just 7 seconds. No more noise pollution!

GREEN CONSUMPTION: No more leaky loos

Aware that new consumption trends linked to eco-responsibility issues have a major impact on public places, such as the service sector, DELABIE has designed the TEMPOFLUX 3 and its electronic counterpart the TEMPOMATIC dual control. Direct flush valves which allow water consumption to be optimised are also eligible for the highest levels of environmental label accreditation such as BREEAM, LEED and HQE.

By removing the need for a cistern - the primary source of leaks in WCs - direct flush also reduces the waste of cold water.

ALLURING: Functional design

Today, in private places as well as public spaces, Function corresponds with Form. DELABIE has, therefore, designed products which combine the practical with the aesthetic.

Incredibly compact, the direct flush system requires very little space, which makes it the perfect asset when designing a space-saving building.

DELABIE is also committed to developing a range of high quality finishes, playing with distinguished materials and a variety of styles. The actuator plates are made from chrome-plated metal or stainless steel with a satin finish, providing architects with ample opportunity to enhance the interior design while furnishing public places with products that are ideally suited to intensive use.

DELABIE's guide

to buying in 3 easy steps:

- Check the price for a product with the same quality, including type of finish
- Check that the product is suitable for intensive use in Public and Commercial Places
- Sign-up for a logical approach to water consumption
