

2021 GERMAN DESIGN AWARD: "SPECIAL MENTION" FOR DELABIE'S ELECTRONIC SOAP DISPENSER

ZERO CONTACT: IT KNOWS HOW TO KEEP ITS DISTANCE!

DELABIE's new electronic soap dispenser for public and commercial places recently won the 2021 GERMAN DESIGN AWARD with a "Special Mention".

The Award

The German Design Award, conferred by the jury of experts at the German Design Council (Rat für Formgebung), is one of the most prestigious design competitions in the world and enjoys a reputation which extends well beyond specialist circles.

Every year the candidates for product design and communication are carefully selected and awarded for their individual, innovative contribution to the evolution of the international design landscape.

The competition imposes extremely high criteria in the selection of its winners. Due to the unique nomination process, only products that rise clearly above the rest in terms of quality and design are invited to compete.

The Winner

DELABIE's electronic soap or hydroalcoholic gel dispenser, requiring no manual contact, convinced the jury both for its functionality and its design.

Hand washing is the basis of good hygiene and an effective measure against bacteria. The electronics reinforce this efficiency. The electronic liquid soap dispenser operates without any contact, thanks to a sensor. The spread of germs by hand is, therefore, impossible.

Its aesthetic and functional lines make this dispenser indispensable for public and commercial places. Available in four finishes - bright polished, polished satin, white powder-coated and matte black stainless steel - its 304 stainless steel cover is distinguished by its sleek design, which not only emphasizes its hygienic nature, but also matches many styles of interior decorations in washrooms.

Designed for public and commercial places, DELABIE's electronic soap dispenser, with no manual contact, is equipped with a lock with a standard DELABIE key. Any attempt at theft, often a problem in public and commercial places, is eliminated. This key, compatible with most of DELABIE's hygienic accessories, makes it easier for maintenance staff to service it. Moreover, the number of doses of soap delivered per detection can be adjusted. The no-waste, non-drip pump cannot be blocked, and dispenses the correct amount of soap per dose. The detection system uses very little energy and allows a battery life of up to 300,000 cycles.

The low battery indicator light and level control window optimises maintenance. The tank, located above the battery compartment, makes it easy to refill the soap.
