

## TEMPOMATIC 4 RECESSED URINAL

Recognised at the 2019 ICONIC AWARDS: Innovative Interior

Ref.: 430PBOX-430036

**DELABIE's TEMPOMATIC 4 electronic urinal valve, in black vitro-ceramic glass, has received the "Selection" award at the 2019 ICONIC AWARDS: Innovative Interior.**

### The Award

The "ICONIC AWARDS: Innovative Interior" recognise the best innovations in the furniture and interior design industry. The design of a room must be considered in its entirety: water controls are no longer regarded as stand-alone items, but as integral decorative elements in their own right.

This international competition creates a unique platform, connecting product designers with architects.

### The Product

The TEMPOMATIC 4 recessed urinal combines design, water savings and rinsing efficiency.

Featuring a "high-frequency" mode, a rinsing system that is unique to DELABIE, this "intelligent" urinal valve is capable of detecting busy periods and adapts its rinsing accordingly. During these periods, the water volume is reduced, only rinsing the bowl between two users. At the end of the busy period, an additional rinse takes place to clean the whole bowl.

Conventional housings can be cut to size behind the collar, which increases the risk of leaks between the wall and the housing. DELABIE has developed a housing that can be cut to size in front of the collar, which ensures a perfect seal. The housing has notches to clip the collar onto and fix it in place easily (patented system).

The elegant design of the black wall plate, in vitro-ceramic, will withstand impacts, fitting perfectly into any type of public or commercial washroom.
