

2021 RED DOT DESIGN AWARD: A RED DOT FOR THE BLACK BINOPTIC RANGE

IT COULDN'T BE CLEARER!

DELABIE's range of BLACK BINOPTIC mixers and taps has won the Red Dot prize at the prestigious Red Dot Award: 2021 Product Design competition.

The award

The Red Dot Award: Product Design, established in 1955, recognises the best products every year. In 2021, a jury of 50 experts across various fields sought out well-designed and innovative products. The committee met over the course of several days to study the presented products in detail. Criteria such as quality, ergonomics and durability were central to the selection process.

The Red Dot Award is one of the largest design competitions in the world with over 18,000 products entered. The coveted Red Dot prize is a highly respected international distinction for exceptional design quality. The winners are presented in directories, museums and also on the website www.red-dot.org.

The product

Specified and installed in a variety of public places worldwide, BINOPTIC represents a stylish and functional range specifically designed for public and commercial places. 100% black chrome design, providing optimal resistance to intensive use.

Operated without manual contact, BINOPTIC prevents the spread of germs by hand. If a mixer or tap is not used regularly, water stagnates in the pipework and bacteria proliferates. To overcome this, BINOPTIC features a periodic duty flush. An automatic flush takes place every 24 hours after the last use. To cap it all, the spout's interior is smooth and holds very little water. BINOPTIC's very design avoids bacterial development and therefore provides total hygiene.

In public buildings, water consumption is a major concern. The taps are used intensively and the user can be neglectful (not shutting off the tap after use). The flow rate is 3 lpm and BINOPTIC shuts off automatically resulting in 90% water savings compared to conventional mixers and taps. The flow rate on BINOPTIC can be adjusted from 1.5 to 6 lpm in order to adapt to the intended use.

The scale-resistant solutions (flow straightener, mechanism) and filters on BINOPTIC mixers and taps ensure minimal servicing. The spare parts are standardised to ensure quick and easy replacement by maintenance staff.

The electronic control unit is fitted with LEDs to aid diagnostic checks. Access to the components (batteries, solenoid valve) is direct, without having to remove the tap. Nothing is missing from this blend of technologies. Beauty and utility have never been so good together.

Installation example:
BLACK BINOPTIC electronic tap
Ref. 388035

Installation example: wall-mounted
version of the BLACK BINOPTIC range
Ref. 379ENCB
