

SECURITHERM SECURITOUCH SHOWER WITH NO CROSS FLOW

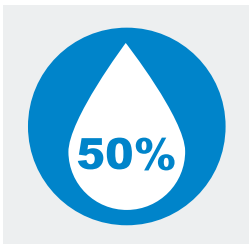

H9769: Dual control thermostatic shower mixer, with no non-return valves

Anti-scalding safety

Hygiene and infection control

Water savings

Ref. H9769

A UNIQUE DESIGN THAT GUARANTEES USER SAFETY AND HYGIENE IN THE HEALTHCARE SECTOR

The new SECURITHERM thermostatic shower mixer H9769 responds perfectly to the needs of healthcare facilities users in terms of anti-safety, hygiene and comfort while optimising the water bill. The mixer's unique design makes any cross flow between the hot and cold water impossible, considerably reducing the risk of bacterial proliferation.

SECURITHERM: Total anti-scalding safety

As with all DELABIE's SECURITHERM thermostatic mixers, this new shower mixer guarantees total anti-scalding safety. The thermostatic cartridge ensures stable temperatures regardless of pressure and flow rate variations in the system.

This mixer is fitted with a double temperature limiter, with the first limiter set at 38°C which can be overridden, and a second set at 41°C. There is no risk of scalding to the user.

The thermostatic technology ensures automatic safety. If the cold water supply fails, the hot water shuts off instantly and completely. Likewise, if the hot water supply fails, the cold water shuts off instantly and completely avoiding the risk of cold showers which may cause the patient to lose their balance or fall. The H9769 mixer also benefits from Securitouch technology, which removes any risk of burns from touching the mixer.

Thermal shocks, at the temperature of the hot water in the system, are also possible with this mixer, without having to remove the control knob or shut off the cold water supply.

BIOSAFE: Infection control Cross flow between the cold and hot water is impossible

The new shower mixer H9769 has been specifically designed to reduce the risk of bacterial development. Thanks to its design, cross flow between the hot and cold water is totally impossible.

Indeed, DELABIE has developed a unique, patented technology where the cold water and the hot water shut off directly at the inlets, rendering the non-return valves completely unnecessary.

No special maintenance is needed and the risk of interconnection is removed. This meets the requirements of the new French standard NF M (Medical).

This mixer was also designed to limit the volume of standing water in the body to a strict minimum, and therefore reduce the risk of bacterial development.

Water and energy savings

Thanks to a flow rate regulated at 9 litres per minute the H9769 mixer can achieve approximately 50% water savings compared to other mixers, while preserving user comfort. The water savings generated allow energy savings, and less equipment is required. Moreover, lower water volumes in the installation mean a lower risk of bacterial proliferation.

The SECURITHERM Securitouch thermostatic shower mixer H9769 is also available as a shower kit for exposed wall-mounting.

A small chrome-plated shelf which can be fitted directly onto the mixer is now available as an option. It provides somewhere for users to put their toiletries, such as shampoo and shower gel.

PRODUCT BRIEF / SECURITHERM SECURITOUCH SHOWER

H9769: Dual control thermostatic shower mixer, with no non-return valves

The new SECURITHERM Securitouch shower mixer H9769 has been specifically designed to meet the needs of healthcare facilities users and retirement homes residents. Thanks to its unique design, lack of non-return valves, very low water volume in the body, etc., this mixer considerably reduces the risk of bacterial proliferation. It also ensures total anti-scalding safety for the user: guaranteed temperature stability thanks to thermostatic technology, maximum temperature limiter, hot water shuts off instantly if the cold water supply fails, mixer body with thermal insulation, etc. With a flow rate of 9 litres per minute, the H9769 mixer achieves more than 50% water savings compared to other mixers, while preserving user comfort. 10-year warranty.
