Waterproof recessing

Ref. 763BOX-763000 and 763BOX-763040

DESIGN, WATER SAVINGS, COMFORT AND EASY TO INSTALL

The TEMPOFLUX 3 features an innovative recessing housing that has been patented by DELABIE. It adjusts to all types of installations and to walls from 10 - 120mm thick. Its resolutely modern wall plate combines design, comfort and vandal-resistance, thanks to its soft-touch operation and anti-blocking function.

Water savings

The TEMPOFLUX 3 with 3L/6L dual flush optimises flushing and water consumption. The flush volume can be adjusted to 2L/4L to achieve the highest standards for environmental labels.

The anti-blocking device controls the flush volume regardless of how long the push-button is pressed for.

Comfort

Thanks to the soft-touch operation, TEMPOFLUX 3 can be used by anyone (children, the elderly or people with reduced mobility).

The acoustic level is low and complies with European standard EN 12541 class II.

Design

The TEMPOFLUX 3's wall plate has a timeless design, available in satin finish stainless steel or chrome-plated metal. Thanks to its sleek lines, it fits perfectly in any type of commercial washroom.

Easy to install

There are multiple installation options for the housing: fixing via the sides onto plasterboard rails, from the front on to a solid wall, or from the rear onto a panel. The housing can be cut to size to fit wall finishes up to 120mm: thick walls (bricks or concrete blocks) for commercial installations subject to high levels of vandalism.

TEMPOFLUX 3 connects from the outside of the housing to a standard installation or a "pipe-in-pipe" connection.

Secure system flush

During installation, the cartridge is replaced by a temporary cap to facilitate and secure the system flush, without risking any damage to this sensitive element.

Waterproof recessing

Conventional housings can be cut to size behind the collar, which increases the risk of leaks between the wall and the housing.

DELABIE has developed a housing that can be cut to size in front of the collar, which ensures a perfect seal. The waterproof seal is integrated into the collar.

The housing has notches to clip the collar onto and fix it in place easily (patented system).

Resistant to intensive use and vandalism

To prevent abuse or waste, TEMPOFLUX 3 is fitted with an AB anti-blocking system. This security feature prevents the valve from being blocked in the open position. The flush takes place only when the push-button is released.

Minimal servicing and simple to maintain

The cartridge, activation unit and stopcock are all accessible from the front. Simply remove the wall plate to gain access. The flush volume can be adjusted (3L/6L or 2L/4L) directly on the rear of the wall plate without shutting off the water supply or removing the flush valve.

Unlike other standard products on the market, TEMPOFLUX 3's backflow prevention device is located inside the housing. In case of backflow, the water will evacuate in front of the wall via the housing, and not behind (or into) the wall.

The flush valve is suitable for grey water and sea water. The flush valve can be disconnected and removed from the inside, without removing the housing, for in-depth maintenance or protecting from frost.

PRODUCT BRIEF/ TEMPOFLUX 3

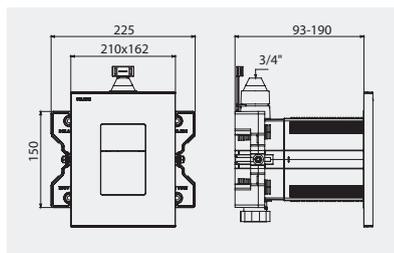

A direct flush dual flush valve with anti-blocking, recessed in an innovative housing

DELABIE's new time flow, direct flush valve combines design, comfort and vandal-resistance. The sleek design of the wall plate - in satin finish stainless steel or chrome-plated metal - fits perfectly in any type of public or commercial building. The same housing can be installed in various ways: on plasterboard rails, solid walls or panels. It is completely waterproof thanks to a patented system for cutting the housing to size in front of the collar. To facilitate maintenance, the sensitive elements (cartridge, filter and stopcock) can be accessed from the front without having to remove the housing. 10-year warranty.
