

2020 MUUZ INTERNATIONAL AWARDS: WINNER TEMPOMATIC DUAL CONTROL ELECTRONIC DIRECT FLUSH WC VALVE

THE RIGHT AMOUNT OF WATER!

DELABIE'S TEMPOMATIC DUAL CONTROL electronic direct flush WC valve (references 464SBOX-464000 & 464PBOX-464006), has won the 2020 MIAW Award.

The award

The Muuz International Awards (MIAW) are organised by Muuz, in partnership with D'A magazine. Every year they recognise the most remarkable architectural, interior design and decorative products. They highlight the most creative manufacturers and ensure the promotion of selected innovations. To identify the Palmarès for this 8th edition, the editorial staff at Muuz considered more than 2,000 innovations. The products were evaluated according to 4 main criteria: design, originality, use and technicality.

The product

More hygienic than WCs with cisterns, the WC direct flush system protects against the risk of bacterial development. The lack of cistern avoids water stagnation as well as the build-up of scale or impurities in the installation. DELABIE's direct flush WC system is particularly effective and fully ensures user comfort. Connected directly to the water system, there is no refill time, the toilet can be flushed without having to wait. Ideal for when there are multiple users, the WC direct flush system also has a very short flushing time.

DELABIE's TEMPOMATIC dual control guarantees an automatic flush if the user decides to leave without pressing the push-button. This dual control feature, coupled with an anti-bacterial duty flush every 24 hours after the last use, guarantees permanent hygiene for the WC pan. Entirely innovative, DELABIE's TEMPOMATIC dual control WC features an automatic, "intelligent" rinsing feature. The system can distinguish between the need for a short rinse or a longer flush (3L/6L can be adjusted to 2L/4L). To avoid misuse and voluntary waste, it has an AB anti-blocking system. This security feature prevents the valve from being blocked in the open position. The flush takes place only when the push-button is released.

Its recessing housing, patented by DELABIE, is also innovative. It is 100% waterproof, modular and suitable for any type of installation. The housing length can be cut to size to adjust to wall finishes from 20 to 120mm. The satin finish stainless steel wall plate will withstand intensive use. Thanks to its sleek lines, it fits perfectly in any type of public and commercial building. This new concept combines design and functionality: the electronics and activation unit are integrated directly in the wall plate and can be accessed from the front without removing the housing to simplify maintenance.
