

2021 GERMAN DESIGN AWARD FOR THE TEMPOMATIC DUAL CONTROL ELECTRONIC DIRECT FLUSH WC VALVE

JUST THE RIGHT AMOUNT OF WATER!

DELABIE's TEMPOMATIC DUAL CONTROL electronic direct flush WC valve (references 464SBOX-464000, 464PBOX-464006) has won the 2021 GERMAN DESIGN AWARD with a "SPECIAL MENTION".

The Award

The German Design Award, conferred by the jury of experts at the German Design Council (Rat für Formgebung), is one of the most prestigious design competitions in the world and enjoys a reputation which extends well beyond specialist circles.

Every year the candidates for product design and communication are carefully selected and awarded for their individual, innovative contribution to the evolution of the international design landscape. The competition imposes extremely high criteria in the selection of its winners. Due to the unique nomination process, only products that rise clearly above the rest in terms of quality and design are invited to compete.

The Product

More hygienic than toilets with cisterns, the WC direct flush system protects against the risk of bacterial development. The lack of cistern avoids water stagnation, as well as scale or impurity deposits in the installation. DELABIE's direct flush WC valve is particularly effective and fully ensures user comfort. Connected directly to the system, there is no refill time, so the flush is available without having to wait. Ideal for toilets facing high-frequency use, the WC direct flush system also has a very short flush time.

DELABIE's TEMPOMATIC dual control guarantees an automatic flush if the user chooses to leave without using the push-button. This dual control function not only provides an anti-bacterial duty flush every 24 hours after the last use, but also provides continuous hygiene for the WC pan. Totally innovative on the part of DELABIE, the TEMPOMATIC dual control has an automatic "intelligent" flushing function. This system is able to distinguish between the need for a shorter or longer flush (3L/6L which can be adjusted to 2L/4L). To prevent intentional misuse or waste, it has an AB anti-blocking system. This security feature prevents the valve from being blocked in the open position. The flush only takes place once the push-button has been released.

Its housing, patented by DELABIE, is also highly innovative. It is 100% waterproof, fully modular and will adapt to any type of installation. The housing can be cut to size and will adapt to wall finishes between 10 and 120mm.
