DESIGN, WATER SAVINGS AND SIMPLE TO INSTALL

The recessed TEMPOMIX 3 is fitted with an innovative, waterproof housing which is patented by DELABIE. This new concept combines design and functionality.

100% waterproof

The integral seal at the back of the collar (see illustration) creates a perfect seal. Conventional housings available on the market can be cut to be level with the wall which increases the risk of leaks.

DELABIE has developed a housing that can be cut to size in front of the collar which ensures a perfect seal.

Modular

There are multiple installation options for the housing.

- The same housing can be installed:
- On plasterboard rails (by the sides)
 - On a solid wall (from the front)
 - On to a panel (from the rear)

Adjustable

This cut-to-size housing is the only product on the market that can adjust to thick walls or thin partition walls. With a length of 120mm, it can be installed on brick or cinder block walls in commercial washrooms exposed to frequent vandalism.

With minimal adjustment it can easily be installed on 10mm partition wall.

Quick and easy to install

The housing can be connected to a standard pipe or a "pipe-in-pipe". The hydraulic connection is made to the exterior of the housing. The housing is supplied with temporary plugs to flush the system safely.

They can then be replaced by the time flow cartridge, filters and non-return valves. The housing has notches. Once the partition wall is in place, the collar simply clips onto the housing (DELABIE patented).

Thanks to the integral seal in the collar, the housing is completely waterproof and the installer does not need to apply anything else (silicone, etc.).

This collar has a dual function, providing a waterproof seal and a bracket for fixing the wall plate.

Minimal servicing and easy to maintain

The technical elements can be accessed from the front without removing the housing. Simply remove the wall plate to gain access. Maintenance is made easy by pre-assembled spare parts.

Ergonomic

Conventional push-button mixers on the market require 6 - 8kg of force. This requires a significant effort. TEMPOMIX 3, thanks to its soft-touch operation, only requires 3kg of force. Even a child under 4 years old is able to wash its hands on its own. Moreover, TEMPOMIX 3 is a single control mixer, the same control turns the mixer on and adjusts the temperature.

Water savings

Water consumption remains one of the key concerns in public and commercial buildings.

The mixers are used intensively and the user may be negligent (forgetting to turn the tap off after use). To overcome this, DELABIE pre-sets its basin mixers and taps at 3 lpm, with automatic shut-off after 7 seconds of flow. This generates 85% water savings compared to conventional mixers.

Design

DELABIE is keen to develop products with a sleek and timeless design which will integrate perfectly with any type of sanitary facility in public or commercial buildings.
